

Harvard Child Health Project

We are all born into a free world but society has created constructs which do not value everyone equally. Moving to Boston from Puerto Rico as a child, my family faced a lot of discrimination. The discrimination I faced from being first-generation, growing up in the projects, and not speaking the language made me a fighter. After learning English in school, I was able to help my family navigate social services where I witnessed how systems can oppress marginalized communities and violate an individual's freedom. This experience instilled in me a respect and compassion for all people regardless of their identity, beliefs, or background.

As a mother, I want to help my two young children break the cycle of poverty. When I see discrimination that upholds the systemic oppression I experienced as a child, the fighter inside me emerges. And even if it is not my fight today, I believe it is my duty to stand in solidarity with any community facing discrimination.

Facing Forward
Harvard T.H. Chan
School of Public Health

In 2018, it was my fight. I was one of the Harvard University Dining Services employees who went on strike for affordable healthcare and fair wages. For 21 days, people from all backgrounds supported and walked beside me. The solidarity displayed between people with seemingly so many differences and the bonds that were created, because we found a common ground, inspired me to believe that change can be achieved through unity.

When I see discrimination that upholds the systemic oppression I experienced as a child,

the fighter inside me emerges.
